

Colorado Green

Serving the green industry in the Rocky Mountain region

A photograph of a well-maintained garden. In the foreground, a stone waterfall flows over several tiers of rocks into a small pool. To the left, a pergola with a stone pillar and wooden beams is visible. The background features a large, lush green lawn, a metal arbor, and several trees. The overall scene is bright and vibrant.

2016 Day of Service

ALCC chapters focus on school projects and landscape education

ALCC chapters joined landscape industry professionals across the country for the annual Day of Service on April 22, volunteering time and materials to help local communities restore and install new landscapes. ALCC chapters worked with schools and students on projects to enhance awareness and learning about landscapes and their value.

The Denver Chapter worked alongside students in the Career Pathway Program at Green Mountain High School, Lakewood. The project involved renovating beds at the main entrance and creating an outdoor learning lab garden. Rather than working for a school, this was the first time volunteers worked with its students. They removed/replaced rock mulch, relocated some plants and planted new ones.

The Northern Chapter partnered with Walt Clark Middle School in Loveland to install a pollinator garden. This project came about as the students were learning about the importance of butterflies and horticulture. ALCC volunteers helped complete some of the work including installing trees, shrubs and a drip irrigation system. Students will plant perennials and grasses.

ALCC's Southern Chapter teamed up with Sierra High School in Colorado Springs to install a landscape lab for their Career Readiness Academy Construction Class. The goal of this project is to foster awareness leading to employment in the landscape industry. The school will use the site to augment their curriculum so students can engage in hands-on learning opportunities such as plant identification, grading and drainage, and paver installation.
